The Platinum Hybrid Mk II Balanced > Halogen Free < Made in E.U.

Very limited-edition high-quality balanced interconnect with extremely purified platinum(!)

A signal conductor with a platinum-coloured HULLIFLEX® High-Density jacket. With our vast knowledge of metal technology, we started by calculating the ideal specifications of the conductor and matched the type of metal that possessed these numbers. It turned out that two 0.3 mm Ø solid core pure platinum conductors were right on the dot. The impedance between two natural conductors is a very precise 110Ω. The result is thus not only a very attractive-looking cable but also probably **the best metal based balanced interconnect on the market today**. After our very successful introduction of the Platinum Hybrid MK I, we have been looking at any possible improvement, which we realised in a lower capacitance conductor with an improved thicker jacket.
